

## Obian Emagineering

### *Collaborative Program Management*

Emagineering's advanced Collaborative Program Management capabilities assist managers to effectively lead critical management programs in areas such as compliance, government contracting, global outsourcing, alliances, and more.

Emagineering is the leading software solution designed to specifically help organizations significantly increase the value they obtain from new and complex programs. Program leaders now have the ability to knowledgeably coordinate the efforts of numerous organizations, both internal and external, in real-time as they work towards meeting a common objective.

The benefits of Emagineering for Collaborative Program Management are:

- Increases the value of program deliverables;
- Lowers the risk of program failure too often caused by miscommunications among diverse, independent organizations;
- Lowers total program costs;
- Decreases the time gap on the critical path between the completion of efforts by one organization and the start of work by the next.

Emagineering allows program leaders to focus on achieving better results faster. It automates their tasks for maintaining a document and report repository that can quickly be searched to identify problems and delays.

Excellent reporting services meet the needs of senior executives and the entire organization. Emagineering

provides heat maps at both the program and issue level. It allows program managers to provide their organization with a detailed situational analysis. It emails instant alerts when due dates are missed or key documents are added.

*Obian Emagineering delivers a comprehensive Collaborative Program Management system providing a structured management framework to effectively coordinate and document the work efforts of diverse organizations.*

### *The Obian Emagineering Solution*

Obian Emagineering provides easy-to-use collaboration and issue management that allows virtual teams to work together and overcome unforeseen obstacles to achieving their program goals. Incorporating and integrating initiative and information management technologies, Emagineering provides comprehensive collaborative program management.

1. **Lead Programs** – Define programs and sub-divide into the phases and work deliverables that comprise it. Manage and lead each one.
2. **Collaborative Work Environment** – Encourage subject matter experts from multiple locations or organizations to participate fully in the activities and decision making processes.
3. **Drive Conflict Resolution** – Decision-making workflow focuses team members on important tasks and due dates. The system automatically publish reports on program progress.
4. **Flexibility** – No programming required to configure Emagineering to mirror your organization's roles, structure and processes.
5. **Reuse and Build Upon Knowledge** – Maintains a context-specific, single repository to facilitate reuse of common data and information across similar management programs, such as maintaining an audit-ready compliance program.

Emagineering raises the bar for team focus and collaboration.

## Collaborative Program Management for Success

In today's business environment, new management programs must either meet recent compliance requirements or they *are* initiatives to achieve compliance with changing government and industry regulations. Emagineering helps program leaders collaborate with program team members to drive business initiatives to a successful completion while meeting compliance requirements.

Emagineering assists program leaders in meeting their compliance requirements by:

- Documenting all work efforts, subject matter expert input, decision-making sign-offs, and deliverables;
- Deploying closed-loop remediation with proactive program management to quickly resolve conflicts blocking progress;
- Coordinating consistency of program policies and principles across organizations;
- Facilitating structured, standard review and approval processes;
- Providing secure access through the Web ensuring that program team member participation is no longer restricted by location.

### Cross-Organizational Collaboration. Programs Completed On Time. On Budget.

Obian Emagineering allows organizations to take a holistic view and provides collaborative value-added services to foster constructive and informed team participation in decision-making and program activities. The framework sets priorities and enforces due dates helping to mitigate missed deadlines, stalled conflict resolution and other negative issues related to management by meeting and consensus by email. Teams complete programs on time, on budget.

**Obian Emagineering is an easy-to-use program management solution designed to effectively help program leaders achieve their objectives while working collaboratively with multiple, independent organizations each having its own complementary competencies.**

Emagineering incorporates and integrates the following technologies:

**Document and Workflow Management** – Stores and manages, with contextual relevance, data critical for each program.

- Automatic meta-data tagging for quick retrieval and knowledge reuse.
- Full-text searching of documents, document annotations, and discussion comments.

**Business Process Management** – Empowers program leaders to accomplish tasks and automatically roll-up reviews for management sign-off and approval.

- Delivers real-time progress updates.
- Program and issue status warnings keep efforts on track.
- Automates decision-making processes.

**Collaboration Management** – Creates a virtual work space for teams to accomplish tasks and resolve issues.

- Documents discussions to identify and retain best practices.
- Enables individuals, managers and executives to share files and collaborate on issues related to risks, problems, and opportunities .
